DERMAPLANING

Dermaplaning is an exfoliation treatment that involves gently scraping the face with a medical-grade scalpel to remove the very top layer of skin. The procedure removes both dead skin cells and the fine vellus hairs that are known as peach fuzz, leaving the surface of the face ultra-smooth. Dermaplaning stimulates the development of new skin cells and helps new skin rise to the surface. It leaves patients with a more youthful and dewy face, but without any harsh chemicals, excessive downtime, or pain.
